SUMMARY

Pega Developer with strong experience in building BPM applications using Pega, including case management, integrations, and rule-based automation. Skilled in designing efficient workflows and debugging using Pega tools. Currently expanding technical expertise in Java development, with hands-on practice in object-oriented programming, data structures, and backend application design. Eager to leverage to deliver scalable, enterprise-grade solutions.

SKILLS

Programming Languages: Java, C, HTML, CSS, JavaScript
Frameworks : Spring Boot, Node.js
Databases : MySQL, MongoDB
BPM Tools : Pega (v23, v24), Appian
Architecture & APIs : Rest API, Microservices
DevOps Tools : Git, Jenkins, Docker, Postman, Maven

EXPERIENCE

Programmer Analyst
Cognizant Technology Solutions, Chennai – Pega Developer

Oct 2024 – Present

- Developed end-to-end BPM solutions using Pega (V23 & 24) to automate business process.
- Completed a **Pega Certified System Architecture (CSA)** certification.
- Participated in the Pega Hackathon to collaborated with a cross-functional team to design and develop an insurance application.

EDUCATION

THIAGARAJAR COLLEGE OF ENGINEERING
BE Computer Science Engineering
CGPA: 8.46 / 10.0

Oct 2021 - May 2024

GOVERNMENT POLYTECHNIC COLLEGE FOR WOMEN
Diploma in Computer Engineering
PERCENTAGE: 92

Jun 2018 - Apr 2021

PROJECTS

PERSONAL TODO TRACKER | Nov 2025 – Jan 2026
Tech stack: **Spring Boot, MySQL, REST API, Microservices, Docker, Jenkins**

- Developed a personal task-management application using Spring Boot with a modular microservice architecture, exposing all operations through RESTful APIs.
- Implemented robust user account management including signup, login and logout.
- Implemented CRUD functionality for personal tasks (add/update/delete/view), with persistent storage in MySQL.
- Packaged the application using Docker, enabling containerized deployment across environments.
- Configured a CI/CD pipeline in Jenkins to automate build, test, and deployment workflows, improving release efficiency.

AI-POWERED EMAIL REPLY GENERATOR | March 2025 – June 2025
Tech stack: **HTML, CSS, JavaScript, Spring Boot, REST API, Postman**

- Designed and developed a microservices-based REST API using Spring Boot to generate intelligent email responses based on user-selected tone (formal, friendly, concise, etc.).
- Implemented a dedicated backend service that integrates with the Gemini AI API to create high-quality, context-aware replies.
- Utilized Maven for dependency management, modular structure, and build automation.
- Tested and validated all REST endpoints using Postman to ensure accuracy, stability, and error-free communication between services.
